MAIN ACHIEVEMENT AND CONTRIBUTION TO THE LITERATURE

- 2009 First description of the surgical technique to implant a choroidal full thickness patch under the macula through a peripheral giant retinotomy
- 2011 Dr Parolini had the intuition of the existence of two different epiretinal proliferations associated to lamellar macular hole, one similar to the classic epiretinal membrane, and one different and not-yet described. She initiated the **First Histological and immunohistochemical analysis of epiretinal proliferation (ERP) associated to lamellar macular holes**, collecting and sending membranes after peeling to Munich to the center directed by Christos Haritoglous, where Richarda Shumann was running the histological and immunohistochemical studies.
- The study led to the acknowledgment of the TWO different epiretinal entities in LMH. Only 5 years later, other authors published the theory of degenerative and tractional lamellar macular hole, but the ERP had been already described.
- 2009 New description of the use of **macular buckle** for MTM
- 2020 The **MTM staging system** summarizing all the knowledge and natural history of MTM in one Table and describing the best treatment approached customized per stage
- 2020 Publication of the long-term results of autologous transplantation of the choroid
- 2023 International Validation of the MTM staging system
